Jiaxuan Gong

gongjiaxuan169@gmail.com gongjiaxuan.github.io Google Scholar

Research Interests

HCI; Human–AI Interaction; Accessibility and Inclusive Design; Immersive Technologies

Education

Jiangnan University, Wuxi, China — Sept 2023 – Jun 2026
M.F.A. in Design Science – GPA: 89/100

Nanjing University of the Arts, Nanjing, China — Sept 2019 – Jun 2023
B.F.A. in Visual Communication Design – GPA: 3.84/5.0

Research Experience

Generative AI and Accessibility: A Systematic Review of Applications, Design, and Evaluation — Jun 2025 – Present
Advisor: Prof. Feng Wang, Jiangnan University, China

- **Project Lead & First Author.** Led a systematic review of 240 papers on generative AI and accessibility; developed the paper-level coding and evidence-synthesis workflow across applications, disability contexts, evaluation, disabled people's participation, output verification, and responsibility.
- Found that disabled people's reported participation was concentrated in evaluation rather than problem definition or design, with limited reporting of responsibilities for checking and response. Submitted to the *International Journal of Human–Computer Interaction*.

Same Product, Different Roles: How Human–AI Design Disclosures Shape Purchase Intention — Feb 2026 – Present
Co-First Author

- Conducted statistical analysis and co-developed the manuscript for three randomized between-subjects scenario experiments with UK adults ($N = 794$), comparing disclosed human and AI generation/selection roles while holding the displayed product constant within each study.
- Studies 1–2 found higher purchase intention for human generation with AI selection than for the reverse allocation; Study 3 found a crossover across tradition- and innovation-oriented brand descriptions. Submitted to ABCSS2026.

Source-aware verification and explicit process policies for language-driven garment design — Jun 2026 – Present
First & Corresponding Author

- First and corresponding author on a source-aware verification study separating parameter contracts, source-relative geometry, stable pattern identities, and explicit process-policy metadata for traceable screening of generated garment patterns.
- Paired offline interventions tested 51 fixed designs across five body presets (255 design–body cases); explicit policies preserved actions under panel renaming when identities, references, and supplied classes were held constant.

VR Acceptance in Cultural Heritage: A Mixed-Methods Empirical Study — Jun 2024 – Jun 2025
Advisor: Prof. Feng Wang, Jiangnan University, China

- **Project Lead & Co-First Author.** Designed the mixed-methods study, validated an extended Technology Acceptance Model using 566 survey responses and CB-SEM, and triangulated the findings through thematic analysis of 20 semi-structured interviews; published in *Heritage* (2025).

Master's Thesis: User Experience and Design of AR Displays for Traditional Crafts — Sept 2024 – May 2026
Advisor: Prof. Feng Wang, Jiangnan University, China | *Outstanding Master's Thesis Award*

- Designed and developed a mobile AR prototype in Unity with Vuforia for Yixing Zisha pottery; collected 388 valid survey responses and tested ten hypotheses using CB-SEM in AMOS, identifying perceived authenticity as an antecedent of perceived usefulness and flow.

Honors and Awards

First-Class Scholarship, Jiangnan University (Top 5%)	2025
First-Class Scholarship, Jiangnan University (Top 5%)	2024
National Second Prize, *Milan Design Week China Collegiate Design Competition & Exhibition*	2024
National Third Prize, *Milan Design Week China Collegiate Design Competition & Exhibition*	2024
Outstanding Graduate, Nanjing University of the Arts (Top 3%)	2023
First-Class Scholarship, Nanjing University of the Arts (Top 4%)	2022
Bronze Award, *Singapore Fine Art Research Association Competition*	2022
National Silver Award, China International College Students' Innovation Competition	2021
First-Class Scholarship, Nanjing University of the Arts (Top 4%)	2021
First-Class Scholarship, Nanjing University of the Arts (Top 4%)	2020

Skills

Research Methods: Randomized Experiments, Survey Design, Semi-Structured Interviews, Thematic Analysis, Systematic Review and Evidence Synthesis, Mixed Methods

Quantitative Methods: Planned Contrasts and ANOVA, Regression and Robust Inference, Bootstrap Analysis, CB-SEM, Reliability and Validity Testing

Design & Prototyping: Figma, Unity3D, Vuforia AR, TouchDesigner, Arduino, Blender, Cinema 4D, Adobe Creative Cloud

Programming & Analysis: Python (data processing, statistical analysis, verification and validation scripting), MATLAB, SPSS, AMOS

Languages & Tests: Mandarin Chinese (Native), English (TOEFL 106), GRE 333 + 4.0
